Add a natural look.
Add the strength
of fibre cement.
Add personality.

Swisspearl Plank is inspired by nature's own design – and created to keep your building safe from wear and tear, heat and cold.

Swisspearl Plank is now available as both traditional lap planks and the new tongue and groove click system.

The product series combines the natural wooden look with high-level durability, giving your building protection against natural elements.

Made from resilient, low-maintenance fibre cement, Swisspearl Plank is the clever, beautiful and long-lasting alternative to wood.

Made from natural materials, our planks are literally designed to last you a lifetime.

**The natural choice
– with exceptional durability**

Swisspearl Plank and Swisspearl Plank Connect are made from fibre cement, designed with typical Scandinavian thoroughness and an eye for detail, are built to last. They withstand everything from searing sunshine to blizzards and torrential rain. And all of this, with virtually no maintenance.

Fibre cement is a natural product made of cement, water, minerals and fibre – and it is changing the way we design and build facades around the world thanks to its long-lasting, expressive qualities.

Every Swisspearl Plank is designed to be:

- Durable – resilient to moisture, dirt and wear-and-tear
- Fire-safe – protecting people and assets
- Low-maintenance and hassle-free
- Surface-treated for resistance to mould and fungi

The ventilated facade

Swisspearl Plank not only adds personality and quality, it is the perfect match for a ventilated facade.

A ventilated facade helps minimise temperature variations in the wall throughout the year. Sunlight and heat are reflected away from the building in the summertime, and insulation behind the facade reduces heat loss at lower temperatures. At the same time, the natural ventilation passing through the structure minimises condensation.

Additional benefits

The ventilated facade has a range of additional benefits:

- Protects the underlying structure from weather conditions
- Drainage of rain water away from the structure
- Low weight facade enables energy-efficient design
- Thin wall structure resulting in more living space
- Flexibility in design with horizontal or vertical joints and board-orientation
- Low maintenance
- Long lifespan

Warranty

Swisspearl Plank shields you from nature. Naturally.

Swisspearl Plank is the obvious choice for a classic facade solution. Inspired by nature's own design, you can choose between a textured or smooth look in a wide range of colours – all while enjoying the benefits of the strong fibre cement material.

With Swisspearl as a partner, you are guaranteed excellence in every step of the process: from a complete portfolio of solutions and accessories to a leading 15-year warranty. And from the quality of the paint layer and backside coating to how the protective foil is wrapped around the finished product.

A classic choice with benefits that will meet your expectations now and in the future.

Long-lasting natural look

Swisspearl Plank facade solutions offer the best of both worlds: a truly authentic natural wood look, combined with stability, resistance to the nature's elements and a long lifespan with an absolute minimum of maintenance.

"Natural wood must be refreshed every five to eight years to maintain its colour, whereas Swisspearl Plank Original does not require re-painting. Once the facade is fixed, the long-lasting boards will not change appearance – even in rough weather conditions. This is a considerable advantage."

At Swisspearl, we continue to innovate so that building residents can enjoy the above benefits and contractors and carpenters can take pride in the quality of their work.

No way in for moisture

In these Swisspearl products, every single square millimetre of the fibre cement is coated so that moisture simply does not have a chance to find a way in, which helps to avoid deterioration and discolouration.

Unwavering appearance

Swisspearl Plank will not warp, deform, rot or discolour. No periodic repainting needed as they will exhibit the same natural properties that made owners or architects choose Swisspearl products in the first place.

Inspired by natural design

The plank boards get a pigmented primer in the same colour as the top coat to give a deep finish. The end result is a product that looks like natural wood with grooves and patterns in a high degree of variation, just as in wood.

Breathing new life into existing buildings

There are many reasons why Swisspearl Plank Original is frequently used when renovating houses or in urban regeneration projects.

Easy to work with

For a start, they are easy to work with – for both the DIY enthusiasts and the professionals. Surprisingly light-weight given their robust, durable nature, they are an obvious alternative to wood or composite material claddings, giving additional protection to the house while bringing a touch of long-lasting elegance. To further minimise potential hassle during installation, we offer plenty of accessories from various aluminium profiles and trims to screws (in matching colours), paint and even tools.

Alternative to wood

Swisspearl Plank Original is ideal for replacing high-maintenance wood as an alternative solution. As a weatherboard for example, or in soffits, gables, dormer windows, fascia boards, hanging eaves, garages, or as balcony skirting.

Energy efficiency

Energy efficiency is another area in which renovation with Swisspearl can make a difference. By using Swisspearl Plank Original as cladding on top of an existing brick wall, it becomes possible to introduce an extra layer of insulation between the two surfaces thereby reducing the energy bill.

Designed to mix-and-match – the new old trend

Combining different building materials has been a part of building traditions for centuries. The trend has developed continuously through the years and so have the materials and underlying reasons behind the combinations. Today, the combination of materials can be chosen for several reasons, it can merely be an aesthetic choice, an economical choice or a way to meet market standards of energy efficiency or sustainability which has gained ground in the last decade.

Swisspearl Plank Original, with its versatile application and design options, is the ideal product for renovation of older houses. Swisspearl Plank Original can be used to complement older brickwork, a modern render or glass facade.

Blending in while standing out

Architects design with Swisspearl Plank Original not only because it is visually attractive and combines perfectly with other cladding materials but also because of its technical performance and ease of installation. They are available either with a smooth surface or an authentic-looking textured finish.

The matte coating applied as protection results in a very natural, wood-like appearance. Additionally, there are 15 standard colours, plus the possibility of ordering customised colours on request. With such a wide range of design possibilities to choose from, it becomes possible to achieve precisely the kind of results that will leave homeowners talking about their home with pride for years to come. Whether people are looking for a modern look, a functional fix or an added touch of classic elegance, we have a solution that fits for every requirement.

PLANK CONNECT

Combining natural beauty with lasting durability and minimal maintenance. Allowing with its tongue & groove an elegant, concealed installation. Ensuring a strong and durable connection.

PLANK CONNECT

Swisspearl Plank Connect is a facade system consisting of tongue and groove planks and stainless steel clips. The planks are fire, mold, and fungi resistant fibre-cement planks. The Swisspearl Plank Connect clips allow for easy hidden fixing of the planks, ensuring a strong and long-lasting connection of the Planks.

Swisspearl Plank Connect – long-lasting beauty. Naturally.

Swisspearl Plank Connect is the obvious choice for a modern facade solution. It is the high-quality, low-maintenance solution delivered with an eye for detail.

As easy to install as it is to maintain

The Tongue & Groove system guarantees a smooth one-click installation. This strong and durable fibre cement cladding outperforms wooden alternatives. The straight contemporary profile and weather resistant coating all around are in a class of their own.

Every plank is developed to exceed expectations in every way: easy application, high-end aesthetics, fire safety and low maintenance.

Swisspearl Plank Connect is truly nature's design, connected with all the modern benefits.

Tagholmen, Aalborg, Denmark

Swisspearl Plank Original – for an authentic facade

An authentic wood facade or a maintenance-free building is a frequent dilemma when it comes to industrial construction. In the Danish business park Tagholmen, however, the dilemma has been solved using the product Swisspearl Plank Original that combines a wooden aesthetic with a low-maintenance fibre cement material.

Located in the north of Denmark, the business park Tagholmen is strategically located near fjord, city and airport. In time, Tagholmen will consist of nine buildings creating a professional community for industrial technology companies. When the first 700 square metre structure was erected back in 2017, the builder was looking for a business environment with an inviting atmosphere:

“The owner of the property, who runs an industrial software company, was looking for a professional office space with a warm and welcoming atmosphere. Drawing inspiration from rustic industrial structures around the Holmen area in Copenhagen, we suggested an architectural design of Tagholmen. Besides the aesthetics, the level of maintenance was also important to the client because it is a commercial property”,

Surface: Textured

Tagholmen Business Park, Aalborg, Denmark. Architect: Tegnestuen 3D, Aalborg, Denmark. Photographer: Swisspearl

says architect Claus Egerland from the Danish architectural firm Tegnestuen 3D and continues:

“To find the best possible solution, we consulted Swisspearl who suggested Swisspearl Plank Original. The Swisspearl Plank Original proved to be the perfect solution combining the look of a traditional wooden facade with the modern and practical function of fibre cement. The deep black colour of the facade boards highlighted the warm vibe of traditional Danish cottages at the same time giving it a strong industrial expression”.

Fixed in a traditional wooden pattern with overlapping planks, Tagholmen’s new facade leaves a vibrant and natural expression of natural wood. Before the construction of Tagholmen, Claus Egerland had only previously seen the facade material used for smaller constructions, e.g. cottages.

“I saw a great hidden potential in Swisspearl Plank Original and wanted to use it on a bigger scale – and the result was extremely satisfying”, Claus Egerland concludes.
