Fasade	Clinar Nobilis Tilpassede farger
Plassering	Muttsee, Linthal (GL), Schweiz
Fotograf	Juerg Hostettler, Winterberg , Sveits
Type bygning	Sport og Fritid

High up in the Swiss Alps, surrounded by rocky mountains at 2,501 meters above sea level, is the Muttseehütte. The facade is covered with elongated fiber cement panels in a strong red color. From the onset of winter until spring, the impressive hut is snowed in and inaccessible. This is a good proof of the high weather resistance of Swisspearl fiber cement. From June to October, the hut is a hospitable contact point for mountain sports enthusiasts; in winter, it serves as an unmanned refuge. A mystical place to enjoy the Swiss mountains.
